

question 1.

(a)

delete (1) = min

joins two min F-heaps with same degree 2 and degree 1

(b) DecreaseKey

(2)

(a)

(b) insert 8 (LR)

insert 1 (LL)

3.

(a) 2-3 tree with 11 keys

(b) delete "10"

First, transform deletion from interior to deletion from a leaf.

(c) delete "1"

(4)

(a)

(b) Step 1. Follow the left child pointers from the root of B to first node x whose rank equals $\text{rank}(S) = 1$.

```

      6 <--- x
      //
      5

```

Step 2. Combine S, 4, and subtree rooted at 6.

```

      4
     / \
    3   6
   //  //
  2   5

```

Step 3. Combine the result of Step 2 to node "7" through a red pointer.

```

      11
     //  \
    7    13
   //  \
  4     9
 / \  // \ \
3  6 8  10
//  //
2  5

```

Step 4. Imbalance (LLb → rotate)

```

      7
     //  \ \
    4      11
   / \    / \
  3  6   9  13
 //  // // \ \
2  5  8  10

```
