Instructor: Dr. Sartaj Sahni Spring, 2004

Advanced Data Structures (COP 5536 /AD 711R) Final Exam

> CLOSED BOOK 120 Minutes

| Name: |  |  |
|-------|--|--|
|       |  |  |

## NOTE:

- 1. For all problems, use only the algorithms discussed in class/text.
- 2. All answers will be graded on correctness, efficiency, clarity, elegance and other normal criteria that determine quality.
- 3. The points assigned to each question are provided in parentheses.

- 1. (12) For B-trees,
  - (a) (6) Start with an empty B-tree of order 4 and perform insert operations using the following keys in the order. Show each step.

(b) (6) Delete the key 30 from following the B-tree of order 6. Draw the result.

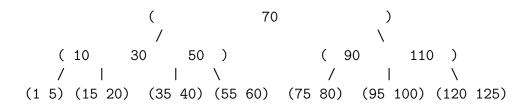

Figure 1. B-tree of order 6.

## 2. (12) Consider the following splay tree:

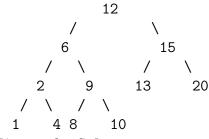

Figure 2. Splay tree

- (a) (6) Insert for the key 7 under the assumption that this is a top-down splay tree. Show each step.
- (b) (6) Delete for the key 12 from the tree of Figure 2. Assume that this is a bottom-up splay (show each step).

3. (10) Insert the following keys into an initially empty instance of Patricia:

## 01001 10010 01100 10000 10101

Draw the Patricia instance following each insertion. Then delete the key 01001, and draw the resulting instance. (show each step)

| 4. (6) | For Suffix tree, | Construct | a clearly | labeled | suffix tree | e for the s | tring babl | oaab. |  |
|--------|------------------|-----------|-----------|---------|-------------|-------------|------------|-------|--|
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |
|        |                  |           |           |         |             |             |            |       |  |

| 5. (10) Explain how to find a node y that is the north neighbor of a node x in a quadtree. y |  |  |  |
|--|--|--|--|
|  | should represent a region of smallest size greater than or equal to that of x. |  |  |
